Applicant's amendment filed on 24 June 2005 has been fully considered. Claims 1-31 have been previously allowed and rejected claims 32-35 have been cancelled. The replacement drawings included in the amendment filed 24 June 2005 has been accepted by the Examiner.

***Examiner's Statement Of Reasons For Allowance***

The following is an examiner's statement of reasons for allowance:

As stated in the previous Office action, mailed 11 April 2005, paper number 042005, claims 1-31 are allowed. The prior art of record fails to disclose or reasonably suggest a method of making at least one hole through an optical transparent body including the steps of providing an ultra short pulse laser having a subpicosecond laser pulse duration, providing a laser output focusing lens, providing a 90%/cm optical transparent body, providing a liquid filled container in contact with the transparent body, directing the laser output through the lens to produce a focused laser output, where the laser output forms a tracing of at least one hole track pattern through the transparent glass and where the hole track pattern is contact with the liquid and creates at least one hole. The closest prior art of record in this application is Japanese Patent 405139787 A to Kondo et al. Kondo et al discloses a photosensitive glass plate also etched by a laser and then heat treated to form a three dimensional shaped groove for receiving an optical fiber. However, Kondo et al fails to disclose all the details in the method steps as disclosed by Applicant. Furthermore, Kondo et al. heat-treats a photosensitive glass plate to form an optical fiber receiving hole as opposed to Applicant who acid etches an oxide bulk glass plate to form an optical fiber receiving hole.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
